DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-38 are rejected under 35 U.S.C. 101 because claims 1-38 recite mathematical algorithm without any limitation to a practical application which produces concrete and tangible results.

Claims 1-38 recite mathematical algorithms without any limitation to a practical application which produces concrete and tangible results. Data manipulation and training of the claimed invention happened on input vectors without reciting the type of training performed by the classifier. Therefore, claims 1-38 are non-statutory.

2. Applicant's arguments filed December 1, 2004 have been fully considered but they are not persuasive.

Applicant argument is moot because the training type of neural network is not established. It is not possible to train the neural network by just changing the input data. The concrete and tangible result is not established because actual process of training of neural network itself is not recited in the specification.
